

THANK YOU
TO OUR WONDERFUL SPONSORS

Cure for the **Kids**
GOLF TOURNAMENT

SUNDAY, AUGUST 15TH, 2021 | SHAFTESBURY GLEN GOLF CLUB

The Juvenile Diabetes Research Foundation is the leading global organization focused on Type 1 Diabetes research. Driven by passionate, grassroots volunteers connected to children, teenagers, and adults with this disease.

JDRF is the largest charitable supporter of Diabetes research.

WHAT IS TYPE 1 DIABETES?

Type 1 Diabetes is an autoimmune disease that causes a person's pancreas to stop producing insulin, a hormone that enables people to get energy from food.

T1D occurs when the body's immune system attacks and destroys the insulin-producing cells in the pancreas, called beta cells.

While the cause of T1D is not yet understood, scientists believe that both genetic factors and environmental triggers are involved. Its onset has nothing to do with diet or lifestyle.

There's nothing you can do to prevent T1D, and at present, nothing you can do to get rid of it.

"Both children and adults like me who live with type 1 diabetes need to be mathematicians, physicians, personal trainers, and dietitians all rolled into one. We need to be constantly factoring and adjusting, making frequent finger sticks to check blood sugars, and giving ourselves multiple daily insulin injections just to stay alive."

— Mary Tyler Moore, JDRF International Chairman
